

ANTONIA WATTS

Colchester, Essex | antoniawatts01@gmail.com | [antoniawatts.github.io](https://github.com/antoniawatts) | linkedin.com/in/antoniawatts/

EDUCATION

University of Essex

Colchester, Essex

Bachelor of Science with Honours: Computer Science, President of Esports Society

Current – June 2028

- Relevant Coursework: Software Engineering, Application Programming, Object-Oriented Programming, Web Development, Fundamentals of Digital Systems, Data Structures and Algorithms I & II, Computer Security, Databases & Information Retrieval

EXPERIENCE

Rescue Air

July 2026 – Current

Website Developer

Remote

- Sole developer for a local HVAC business based in Tennessee, responsible for the development, deployment, maintenance, and ongoing improvement of the company's customer-facing Next.js website
- In charge of resolving bugs and technical issues, troubleshooting, updating features, and maintaining functionality across all platforms
- Implemented SEO fundamentals and contact form integration for optimizing customer traffic, providing search visibility, and building business credibility

Girls Who Code

January 2025 – June 2025

Facilitator for UArizona Women in Science & Engineering

Tucson, AZ

- Mentored grades 6-12 students in core computer science concepts through coding instruction & debugging support
- Led teams developing applications involving Python, AI, robotics, game development, and web design
- Facilitated educational presentations and class discussions highlighting women in STEM and inclusiveness

PROJECTS

Internship Application Tracker – Go, Next.js/React, Typescript, PostgreSQL, Docker

Current

- Developing a full-stack web application that allows users to track internship application progress
- Currently defining the PostgreSQL schema and database layer to support the Go API's CRUD operations for tracking

Portfolio Website – HMTL, CSS

July 2026

- Four-page responsive website built with pure HTML and CSS to showcase personal achievements
- Designed custom page layouts, navigation design, and interactive formatting without templates or external libraries

Heart Disease Machine Learning Model – Python, Pandas, scikit-learn, Colab

May 2026

- Used the heart disease UCI dataset to train a Random Forest Classifier to accurately predict heart disease based on patient symptoms
- Learned Tuleap and agile scrum project management framework to record progress and assign tasks to our team

Country Facts Desktop App – Java

April 2026

- Developed a Java Swing desktop app that retrieves and displays live country facts from the REST Countries API onto a user interface with a search field and formatted results window.
- Built custom API handling and JSON parsing logic with validation and API data error handling
- Applied object-oriented design principles including encapsulation, inheritance, abstraction and dependency injection
